## Profile

I'm a Senior Mobile & Software Engineer with 13+ years of professional experience, primarily focused on Android, Flutter, and modern backend systems. Began Android development in 2012, publishing public Play Store apps with up to 10k downloads and have grown alongside the platform—adapting to new architectures, tooling, and engineering standards as the ecosystem evolved.
For personal and side projects, I primarily use Flutter to rapidly prototype and ship cross-platform mobile applications.

## Experience

| | |
|---|---|
| 2023 – 2024<br>DeenLabs GmbH | **Tech Lead & Senior Software Engineer**<br>As an early-stage startup member, led the ideation, architecture, and end-to-end implementation of Qisara (qisara.com), a mobile app product. Designed and built the backend using Deno.js and TypeScript, set up infrastructure on a VPS using Coolify, and developed the Flutter mobile app from scratch. Defined the overall application architecture, implemented core features including navigation, localization, payments, and persistence, and took full technical ownership across backend, mobile, and infrastructure. |
| 2020 - Present<br>AppDev GmbH | **Senior Android Developer**<br>Worked on large-scale public transport and retail applications including Deutsche Bahn – Wohin Du Willst (Nov 2023 – Present), RMVGo (Jun 2020 – Aug 2022), and Edeka (Aug 2022 – Nov 2023). Contributed in cross-disciplinary agile teams (Android, iOS, backend) and played a key role in modernizing architectures, migrating from MVP/RxJava to MVVM with Coroutines and Flow, and improving accessibility and UI quality. Experience includes multi-module development, white-label solutions, CI/CD pipelines, and maintaining production apps with millions of users. |
| 2015- 2020<br>Adrsys GmbH & Co. KG | **Senior Android Developer**<br>Developed and maintained Android applications in the FinTech and insurance domains, contributing to large-scale products such as easyCredit / Fymio and Ergo Direkt. Worked in agile interdisciplinary teams and supported architectural setup using Kotlin, Java, MVP, and MVVM. Additionally developed internal Flutter-based mobile applications (2019) for company use, gaining early hands-on experience with Flutter. Built and maintained an open-source Android security library and mentored four working students, supporting their professional and academic development. |

## Education

| | |
|---|---|
| 2012 - 2014<br>University for Business & Technology | **Computer Sciences** |
| 2016<br>androidatc.com | **Android Certified Application Engineer** |
